

Computer Engineering 176: Lab Assignment 8

Assignment

Part I

Write a Java servlet to process the input data and return results for the simple online temperature converter from the previous assignment. Use the same forms as the previous assignment, but with the ACTION changed.

Part II

Write a Java servlet that establishes a session with the client and reports how many times that client has connected to the servlet. Verify that your servlet works correctly by connecting from multiple clients simultaneously. You can find an example servlet running at:

`http://www.cse.scu.edu/servlets/atkinson/Session`

Grading

Demonstrate the use of your servlets to the Teaching Assistant and turn in hardcopies of your source code.
