

COEN 11 - Practice V

Solutions on Monday

1. Write a function to compare two files. Your function should receive the file pointers and printf either "Files are equal.\n" or "Files are not equal.\n". Use fread, fwrite, and a buffer to make the process more efficient!
2. Write a function to compare two text files and show the 1st line in which they differ. Use fgets and assume that the lines are always smaller than 100 bytes.
