Cellular phones and mobile apps are empowering people in underserved communities.

**Problem:** Young homeless women need help, but they are hard to reach.

**Solution:** Two mobile apps: one enables health providers to identify them, and the other provides them with info about resources.

**Helping the Homeless**
- Homeless Announcement Tool

**Helping Social Enterprises**
- mFarm
- SOKO
- Clinicas del Azucar
- Salauno

**Affordable Devices**
- HearThat?

**Problem:** Expensive hearing-aid devices.

**Solution:** App to enable using a cellular phone as a hearing-aid device.

**Problem:** Expensive audiometry equipment not available in underserved communities.

**Solution:** Time and cost-effective mobile app to perform audiometric tests.

**Problem:** Sending information to homeless people.

**Solution:** SMS-based tool to enable service providers to send SMS messages to registered homeless people.

**Problem:** Sending information to homeless people.

**Solution:** SMS-based tool to enable service providers to send SMS messages to registered homeless people.

**Problem:** Expensive hearing-aid devices.

**Solution:** App to enable using a cellular phone as a hearing-aid device.

**Problem:** Educating people about diabetes, prevention and treatment.

**Solution:** Mobile tool including a web-based repository of articles and an app to browse and read them.

**Problem:** Communication with patients.

**Solution:** SMS-based tool to send SMS reminders to patients according to the stage of their treatment.
